百叶系统叶片可在0-135°多角度旋转，确保室内光线适应太阳光线的变化。

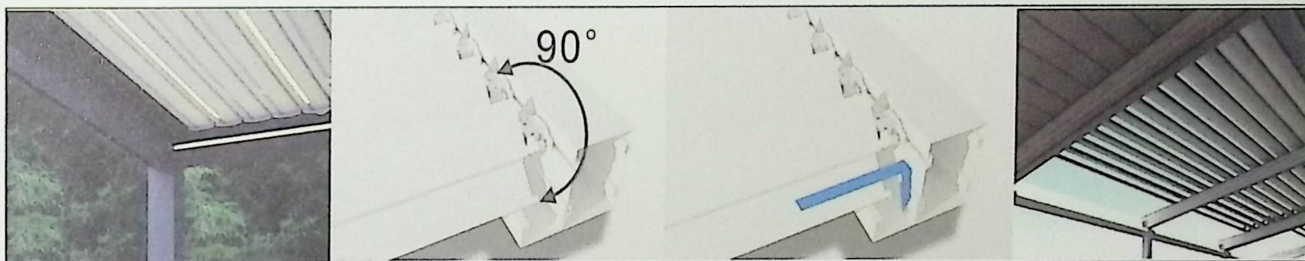

在雨天，当百叶系统关闭后会形成一个防水顶面，集成排水系统使雨水流经立柱而排出。

打开LED灯时，不受外界恶劣天干扰，室内又形成一个温馨的密闭生活空间。

The louver system blades can be rotated at multiple angles of 0-135° to ensure that the indoor light adapts to changes in the sun's rays.

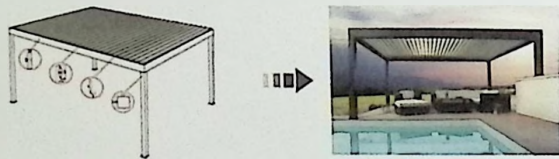

In rainy days, when the louver system is closed, a waterproof top surface will be formed, and the integrated drainage system allows rainwater to flow through the columns and drain.

When the LED light is turned on, it is not disturbed by the bad weather outside, and a warm and closed living space is formed indoors.
